

Git and Github

Part- 2- Answers

Q1. Open the Command Prompt or PowerShell by searching for "cmd" or "PowerShell" in the

- `git pull`, on the other hand, is used to fetch and integrate changes from a remote repository into your local working branch. It's essentially a combination of two separate commands: `git fetch`, which downloads the changes from the remote but does not integrate them, and `git merge`, which incorporates the fetched changes into your current branch.
- `git pull` is used when you have already cloned a repository and want to update your local branch with the latest changes from the remote repository.
